

GlideStep Seated Walker

Safely Walk with the Security of Seat Beneath You

Problem:

Patient cannot safely ambulate

Past Solutions:

Wheelchair which continues to deteriorate the muscles

Gait Trainer, parallel bars, and waist belt which can only be used at physical therapy

Standard Walker which requires the user to depend on their upper body strength to support their weight.

GlideStep Advantages:

- Seated design allows proper ambulation with stability
- Adjustable seat accommodates full or partial weight bearing
- Added support encourages walking further to build endurance
- Security provides independent rehabilitation
- Braking system with locking capability provides safety
- Folds easily for transportation and storage
- Lightweight design weighs only 20 lbs
- Increased independence and quality of life
- Easy to use, affordable, and durable

HCPC E0140-NU for GlideStep
plus E0156-NU for Seat

Current Uses of GlideStep:

- Neurological disorders
- Retraining motor movements
- Balance complications
- Lack of strength
- Lack of endurance
- Chronic pain, loss of feeling, or weakness in the legs

GlideStep Walker provides patients the security of a seat beneath them with the convenience they need to continue to be mobile while rehabilitating, getting exercise, and living their lives.
